

3B Medical CPAP Supply Replacement Guide

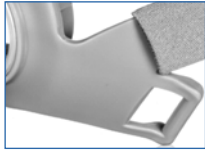

Replacing CPAP and mask accessories is very important to maintain air pressure and compliance. Comfort is the number one reason why people stop using CPAP. Maintaining a regular resupply will keep the CPAP accessories fresh and provide optimal fit for masks.

Why Replace?

Mask Cushions begin to wear out and lose shape, once this happens they tend to leak.

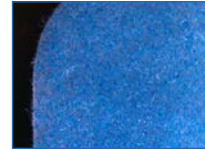

Mask Frames are usually made of plastic and small cracks can appear in areas of high stress, wearing out hooks, clasps and especially moving parts.

Mask Headgear loses elasticity and Velcro tabs begin to wear out and lose their "gripping" power.

Hoses can have small rips in the soft plastic leading to unknown leaks and loss of pressure, hoses are also the hardest component to keep clean and dry and biofilm may develop.

Air Filters wear out and deteriorate, making them ineffective against particles or they can have blockages and not filter effectively.

Water Chamber plastic can be damaged by high heat or chemicals and minerals in water, causing the plastic to become discolored over time. Silicone seals and gaskets wear out making them less water tight and leaving space to harbor germs.

The table below is based on Medicare guidelines for parts resupply. Most commercial insurance will follow the same schedule, however we do recommend always contacting your insurance provider to ensure coverage of resupply parts.

Product Type	HCPCS for Reimbursement	Replacement Schedule
Full Face Mask	A7030	1 per 3 months
Full Face Mask Cushion	A7031	1 per month
Nasal Mask	A7034	1 per 3 months
Nasal Mask Cushion	A7032	2 per 1 month
Nasal Pillow Interface	A7034	1 per 3 months
Nasal Pillow Replacement Cushion	A7033	2 per 1 month
Mask Headgear (all types)	A7035	1 per 6 months
Filter Disposable	A7038	2 per 1 month
Filter Non-Disposable	A7039	1 per 6 months
Tubing	A7037	1 per 3 months
Tubing Heated	A4604	1 per 3 months
Water Chamber	A7046	1 per 6 months
